

# An Introduction to the IMDG Code

**Welcome to this free introduction to the IMDG Code from Exis Technologies.**

**This provides a brief overview of the provisions contained in the International Maritime Dangerous Goods (IMDG) Code.**

# What is the IMDG Code?

**The International Maritime Dangerous Goods (IMDG) Code contains provisions for the safe carriage of dangerous goods by sea.**

The key objectives are to:

- protect human life
- prevent marine pollution
- facilitate the free movement of dangerous goods.

# What is the IMDG Code?

## The International Maritime Organization (IMO)

The IMDG Code is produced by the International Maritime Organization (IMO), a specialist United Nations (UN) agency responsible for developing and maintaining regulatory frameworks for sea transport.

The Code's provisions are based on recommendations developed by the UN and published in 'Recommendations on the Transport of Dangerous Goods'. These regulations provide a uniform framework of rules for the safe transport of dangerous goods by all modes – air, road and rail as well as sea.

# What are dangerous goods?

## What are dangerous goods and why are they useful?

Dangerous goods are **substances** or **articles** which can pose a threat to people, property and/or the environment.

They can exist in three physical states – as a solid, liquid or gas – and can present a range of dangers in a transport environment – flammability, toxicity (poisonous) and corrosivity being the most common.

The physical state and properties affect packing, handling and transport decisions.

Many dangerous goods are essential in the manufacture of other products such as cars, plastics, electronics and pharmaceuticals on which progress and world trade depend.

# Different types of dangerous goods

For transport purposes, dangerous goods are allocated to one of nine 'classes', according to the main danger they present. These are as follows:

Class 1 - Explosives

Class 2 - Gases

Class 3 - Flammable liquids

Class 4 - Flammable solids; substances liable to spontaneous combustion; substances which, in contact with water, emit flammable gases

Class 5 - Oxidizing substances and organic peroxides

Class 6 - Toxic and infectious substances

Class 7 - Radioactive material

Class 8 - Corrosive substances

Class 9 - Miscellaneous dangerous substances and articles (Class 9) and environmentally hazardous substances

# Different types of dangerous goods

Many of the classes are sub-divided. For example, toxic substances are allocated to Class 6.1; infectious substances are allocated to class 6.2.

Substances or articles are classified as 'dangerous goods' for sea shipment if they meet the classification criteria prescribed in the IMDG Code for any of these classes.

The danger(s) presented by a particular substance or article determine the safe transport procedures for it e.g. the way it needs to be packed, whether it can be loaded in the same freight container as other dangerous goods, where it needs to be stored within the port or stowed on board the ship.

# Identifying Dangerous Goods

Each class has a unique diamond label used to identify danger in transport.

# Identifying Dangerous Goods

All dangerous goods are uniquely identified for transport by UN Numbers and Proper Shipping Names (PSNs).

The UN Number and PSN facilitate rapid and precise identification during transport to ensure correct handling, stowage, segregation etc., and appropriate actions in an emergency.

# Identifying Dangerous Goods

In the example below we can see that 'Kerosene' is classified as a flammable liquid (class 3); 'KEROSENE' is the recognised PSN; the UN Number for it is UN 1223.

Hazardous Substance/Article Details			
Classification Information			
(1) UN Number:	1223	(2) Proper Shipping Name (PSN): (in bold)	<b>KEROSENE</b>
(3) Class or division:	3	(4) Subsidiary Hazards:	
(5) Packing Group:	III	(6) Special Provisions:	-
(7a) Limited quantities:	5 L	(7b) Excepted quantities:	E1
Packing Information			
(8) Packing instructions:	P001 LP01	(9) Packing provisions:	-
(10) IBC instructions:	IBC03	(11) IBC provisions:	-
(13) Tank instructions:	T2	(14) Tank provisions:	TP2

# Application of the IMDG Code

The IMDG Code's requirements apply to all ships which are subject to the following two conventions:

**International Convention for the Safety of Life at Sea, 1974 (SOLAS 1974)** – this covers the safety implications of dangerous goods onboard ships; and

**International Convention for the Prevention of Pollution from Ships (MARPOL)** – which covers the pollution aspects for ships carrying dangerous goods

# Application of the IMDG Code

The IMDG Code amplifies the relevant safety and pollution prevention provisions of these Conventions.

Most of the requirements in the IMDG Code apply on a mandatory basis but there are a few provisions which are recommendatory.

The IMDG Code is applied automatically by the governments of all the States which are members of SOLAS, and has a worldwide application to the movement of dangerous goods by sea.

While some SOLAS Member Governments incorporate the requirements of the IMDG Code without amendment into their national legislation, others apply some different and/or additional (usually more stringent) national requirements.

# Application of the IMDG Code

Other international and national modal regulations also exist. For example, in many countries dangerous goods transport by road transport is covered under ADR. Compliance with these is required, as appropriate; they may recognise all or part of the provisions of the IMDG Code.

When shipping dangerous goods, it is also important to be aware of any further restrictions or requirements which may apply in a particular country or port.

Additionally, **competent authorities** may authorise, approve or grant exemptions from particular requirements of the IMDG Code.

# Overview of the IMDG Code

The IMDG Code requires certain provisions to be followed whenever dangerous goods are shipped by sea.

These provisions require that dangerous goods are correctly and safely:

- Classified and identified
- Packed
- Marked, labelled and placarded
- Documented
- Stowed on board the vessel
- Segregated from other goods with which they may react dangerously

In addition appropriate emergency response information must be available and security and training requirements must be followed

# Layout of the IMDG Code

The IMDG Code comprises 7 parts, presented in two volumes – Volume 1 and Volume 2.

Both volumes must be used to obtain the required information and instructions when dangerous goods are shipped by sea.

There is also a Supplement which provides additional guidance.

The IMDG Code is available in printed book, E-reader, Web and Intranet formats.

# Layout of the IMDG Code

**Volume 1** contains most of the detailed instructions for safely preparing and transporting dangerous goods by sea:

- **Part 1:** General Provisions, Definitions, Training, Security and Radioactive Material Transport
- **Part 2:** Classification
- **Part 4:** Packing and Tank Provisions
- **Part 5:** Consignment Procedures
- **Part 6:** Construction and Testing of Packagings, Intermediate Bulk Containers (IBCs), Large Packagings, Portable Tanks, Multiple Element Gas Containers (MEGCs) and Road Tank Vehicles
- **Part 7:** Provisions Concerning Transport Operations

# Layout of the IMDG Code

**Volume 2** contains:

- **Part 3:** Dangerous Goods List (DGL), Special Provisions and Exceptions (Limited and Excepted Quantities)
- **Appendix A:** List of Generic and N.O.S. Proper Shipping Names
- **Appendix B:** Glossary of terms
- **Alphabetical Index:** An alphabetical index of Proper Shipping Names, synonyms and other names

# Dangerous Goods List (DGL)

In the IMDG Code, most of the decisions on safe shipping and transport procedures stem from the use of the DGL located in Volume 2.

The **DGL** is an index of substances and articles, arranged in UN Number order. It comprises 18 columns of information for each listed substance/article, presented as a two page spread in the printed books. Much of the information is in a coded form to make it easier to present in a table.

# Dangerous Goods List (DGL)

The meaning and implications of these codes are explained in the relevant chapters and sections of Volumes 1 and 2, an initial point of reference being provided at the head of each column.

For example, column 16b provides 'SG' segregation codes the meaning of which can be found in 7.2.8.

Decisions on packing arrangements, marking and labelling requirements, documentation entries, stowage, segregation and other shipping and transport duties generally stem from the columns of the DGL.

# Alphabetical Index

At the end of Volume 2 of the IMDG Code, there is an alphabetical index of substances/articles.

UN No	Class	MP	Name
<a href="#">2075</a>	6.1	-	CHLORAL, ANHYDROUS, STABILIZED
<a href="#">1458</a>	5.1	-	CHLORATE AND BORATE MIXTURE
<a href="#">1459</a>	5.1	-	CHLORATE AND MAGNESIUM CHLORIDE MIXTURE, SOLID
<a href="#">3407</a>	5.1	-	CHLORATE AND MAGNESIUM CHLORIDE MIXTURE SOLUTION
<a href="#">3210</a>	5.1	-	CHLORATES, INORGANIC, AQUEOUS SOLUTION, N.O.S.
<a href="#">1461</a>	5.1	-	CHLORATES, INORGANIC, N.O.S.
		P	Chlordane, see <a href="#">ORGANOCHLORINE PESTICIDE</a>
		-	Chlordimeform, see <a href="#">ORGANOCHLORINE PESTICIDE</a>
		-	Chlordimeform hydrochloride, see <a href="#">ORGANOCHLORINE PESTICIDE</a>
		P	Chlorfenvinphos, see <a href="#">ORGANOPHOSPHORUS PESTICIDE</a>
		-	CHLORIC ACID, AQUEOUS SOLUTION with a concentration exceeding 10% (transport prohibited)
<a href="#">2626</a>	5.1	-	CHLORIC ACID, AQUEOUS SOLUTION with not more than 10% chloric acid
<a href="#">3082</a>	9	P	Chlorinated paraffins (C10-C13), see
<a href="#">3082</a>	9	P	Chlorinated paraffins (C14-C17) with more than 1% shorter chain length, see
<a href="#">1017</a>	2.3	P	CHLORINE
<a href="#">3520</a>	2.3	-	CHLORINE, ADSORBED
<a href="#">2901</a>	2.3	-	Chlorine bromide, see
<a href="#">1589</a>	2.3	P	Chlorine cyanide, stabilized, see
<a href="#">2548</a>	2.3	-	CHLORINE PENTACHLORIDE

This can be used as the initial point of reference when the name of the substance rather than the UN Number is known.

# Layout of the IMDG Code Supplement

The IMDG Code Supplement contains the following sections related to the Code.

- Emergency Response Procedures for Ships Carrying Dangerous Goods;
- Medical First Aid Guide;
- Reporting Procedures;
- Safe Use of Pesticides in Ships, in CTUs and cargo holds;
- International Code for the Carriage of Packaged Irradiated Nuclear Fuel, Plutonium and High-level Radioactive Wastes on board ships.
- An appendix of relevant IMO Resolutions and Circulars

# Updating the IMDG Code

The IMDG Code is an international regulation that is updated every two years to reflect biennial revisions in the UN Recommendations on the Transport of Dangerous Goods (UN Model Regulations). Each Amendment is valid for up to three years

These changes reflect:

- the inclusion of newly classified dangerous substances/articles, amendments to or deletions of existing entries;
- new technology and new methods of handling dangerous goods;
- safety concerns which arise as a result of human experience; and
- new materials and designs for packaging

Although the Code is updated every two years, in general, the basic principles remain constant and once you have understood them, you will be able to look up information in future versions of the IMDG Code.

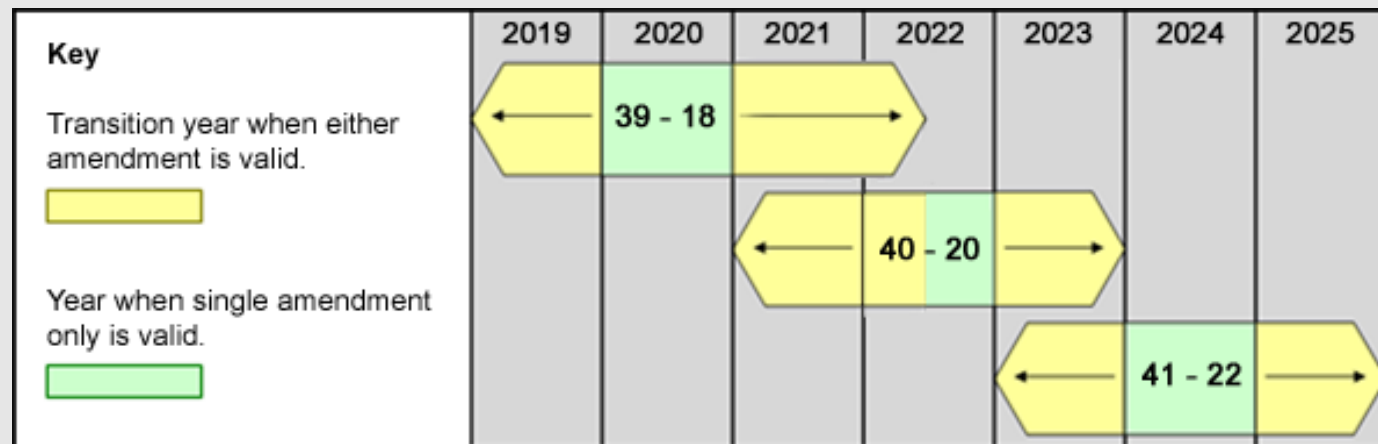

# Amendment cycle of the IMDG Code

New Amendments can be used from 1 January of odd numbered years (shown in yellow) subject to the timing of National Competent Authority adoption. During even numbered years (shown in green) **only the current Amendment can be used**

The years before an Amendment comes into force on a mandatory basis are known as transition years (shown in yellow) when either the current or newly published Amendment may be used.

**Note:** The enforcement date for Amendment 40-20 is 1 June 2022 due to delays encountered finalizing this Amendment during the Covid-19 pandemic. Amendment 39-18 may be used until the end of May 2022.

# Training requirements for shore side staff

The successful application of dangerous goods transport regulations is greatly dependent on all persons concerned appreciating the risks involved and having an appropriate understanding of the requirements.

This can only be achieved by properly planned and maintained training and retraining programmes for all relevant personnel.

Chapter 1.3 of the IMDG Code deals with the training of shore-side staff.

**The training requirements for shore-side personnel are MANDATORY**

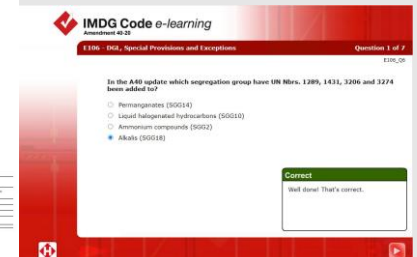

# Training requirements for shore side staff

Personnel engaged with the transport of dangerous goods by sea **must** be trained according to their role and responsibilities. Staff directly involved in dangerous goods operations must have function specific training while general awareness training is required for those who although not directly involved, do require a familiarisation with the IMDG Code.

Companies must determine which personnel need to be trained, the level of training required and appropriate methods for conducting the training.

IMDG Code e-learning was developed to meet the challenge of training large numbers of shore side staff to the mandatory IMDG Code training requirements in Chapter 1.3 of the IMDG Code.

# Compliance solutions from Exis Technologies

## ***Hazcheck Systems***

Compliance tools for the automatic validation of dangerous goods shipments. The tools are available for all sectors involved in the transport of dangerous goods by sea, from shippers to deep sea container lines. *Free trials available*

[www.hazcheck.com](http://www.hazcheck.com)

## ***IMDG Code e-learning***

Online training for shore side staff involved in the transport of dangerous goods by sea. Used by shippers, ferry operators, port operators, freight forwarders and 6 of the top 10 container lines to train staff worldwide. *Free trial available*

[www.imdge-learning.com](http://www.imdge-learning.com)

## ***CTUpack e-learning***

Introduction to CTU Code course - online training for safe handling and packing of CTUs [www.ctupack.com](http://www.ctupack.com)

## ***Tank Container e-learning***

An online tank container course developed by the International Tank Container Organisation (ITCO) to further enhance the safe, competent and efficient use of tank containers. [www.tankcontainer-elearning.com](http://www.tankcontainer-elearning.com)

[www.existec.com](http://www.existec.com)
