National Cargo Bureau and Exis Technologies unify under the brand NCB

In a significant move to strengthen our commitment to safety and compliance in cargo transportation, National Cargo Bureau and Exis Technologies have come together under a unified brand, NCB.

This collaboration aims to leverage combined expertise, experience, and technological innovation to further enhance the safety of life and cargo at sea.

Detecting Hazardous Cargo using Machine Learning

NCB are pleased to announce a significant advancement in Hazcheck Detect, made possible by the integration of a new AI/Machine Learning rules handling feature. This update marks a new era in cargo screening with the new rule model designed to cater to the unique and individual requirements of our customers.

The new feature considers customers own historical data, referencing both non-DG and declared DG bookings and, using Natural Language Processing (NLP), recognises the presence of key terms found in screened data. It proficiently identifies key terms present in declared DG bookings, enabling the detection of similar terms in undeclared DG shipments.

Awards Success

We are thrilled to announce our triumph in the Innovation category at the BusinessIQ Awards!

This remarkable accomplishment is a result of the outstanding achievements of our Hazcheck Solutions. These compliance products have gained the trust and widespread adoption by almost all large container lines worldwide. The receipt of this award serves as a strong affirmation of the innovation within Hazcheck Detect, our pioneering cargo screening solution.

Free Introduction to the CTU Code Course

Following the launch of Hazcheck Learn, we are delighted to offer two introductory courses completely free of charge. One of these courses is a comprehensive introduction to the CTU Code.

This course aims to familiarize you with the Code of Practice for the packaging of cargo transport units. It provides valuable insights into the development and objectives of the CTU Code, accompanied by convenient direct links to the electronic version of the CTU Code.
